About Elixir Technology Pte Ltd

Using JDBC Data Source with Oracle Database 10g

Elixir Repertoire supports JDBC connectivity to Oracle Database 10g.

Prerequisites

Below is a list of prerequisites needed for a successful connection to Oracle Database 10g.

1) Oracle Database 10g (Express Edition is used for this document)

Oracle Database 10g Express Edition Release 10.2.0.1.0 - Production

PL/SQL Release 10.2.0.1.0 - Production

CORE 10.2.0.1.0 - Production

TNS for 32-bit Windows: Version 10.2.0.1.0 - Production

NLSRTL Version 10.2.0.1.0 - Production

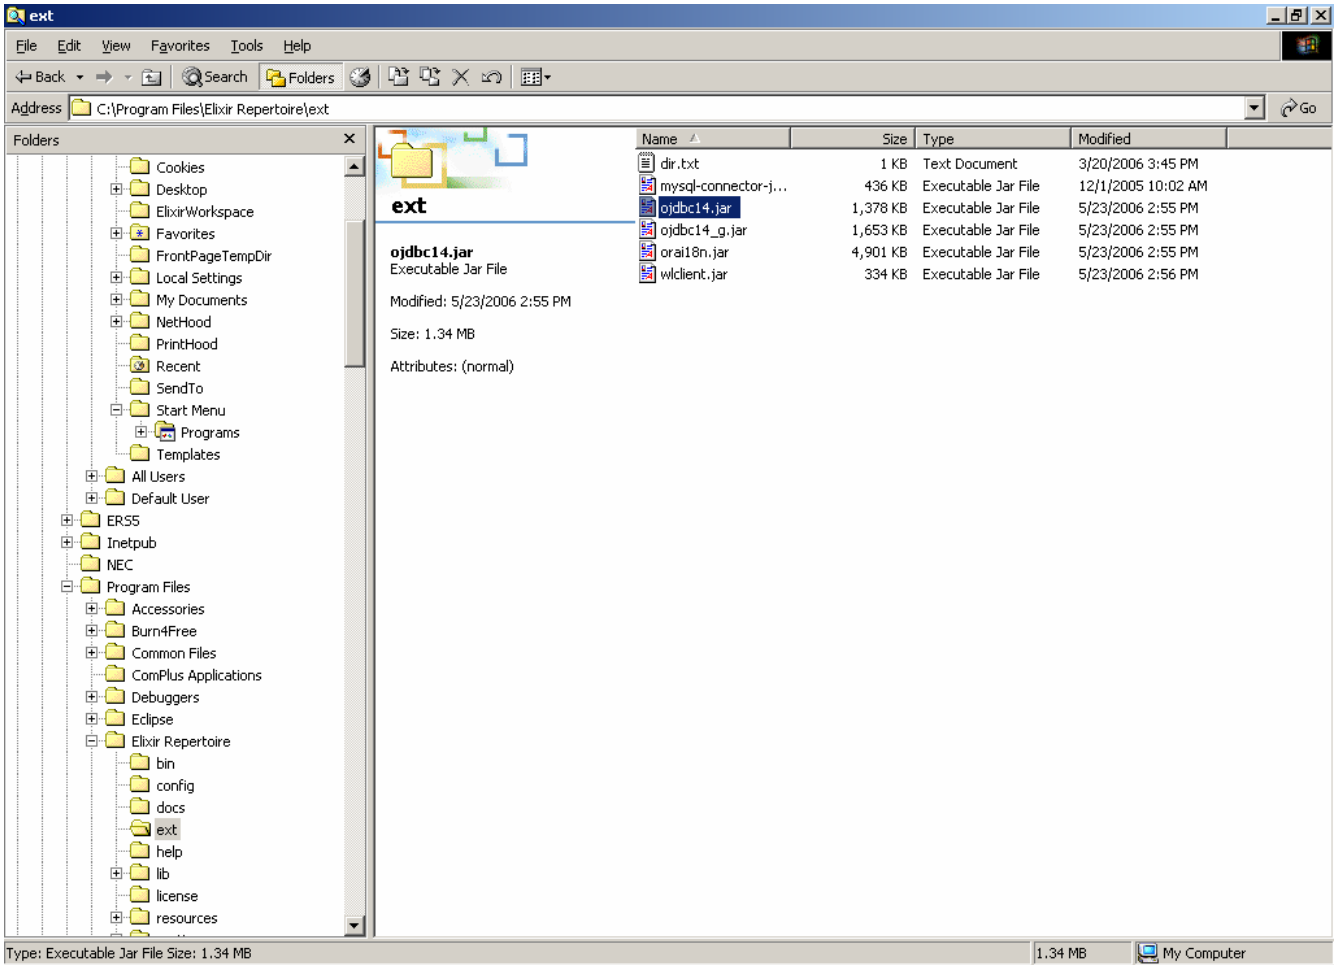

2) JDBC Driver (ojdbc14.jar – classes for use with JDK 1.4)

The driver jar file is usually found in the Oracle jdbc lib directory.

3) Oracle Database 10g services are started.

4) Oracle JDBC driver is deployed in Elixir Repertoire ext directory. The same applies to Elixir Repertoire Server.

You can verify database setup via Oracle Database Console

Creating a JDBC Data Source in Elixir Repertoire

Follow the steps below to create a JDBC Data Source in Elixir Repertoire.

1) Obtain JDBC connection parameters.

Database Name: XE

Host: localhost (for connection on the same machine)

Port: 1521 (Default)

JDBC Driver Class Name: oracle.jdbc.driver.OracleDriver

User Name: hr (from default schema)

Password: hr (from default schema)

URL: jdbc:oracle:thin:@[host]:[port]:[DatabaseName]

Please refer to the driver readme file for latest changes.

Datasource Wizard
Define JDBC Datasource
Enter JDBC datasource parameters

Name: Employees
Description:

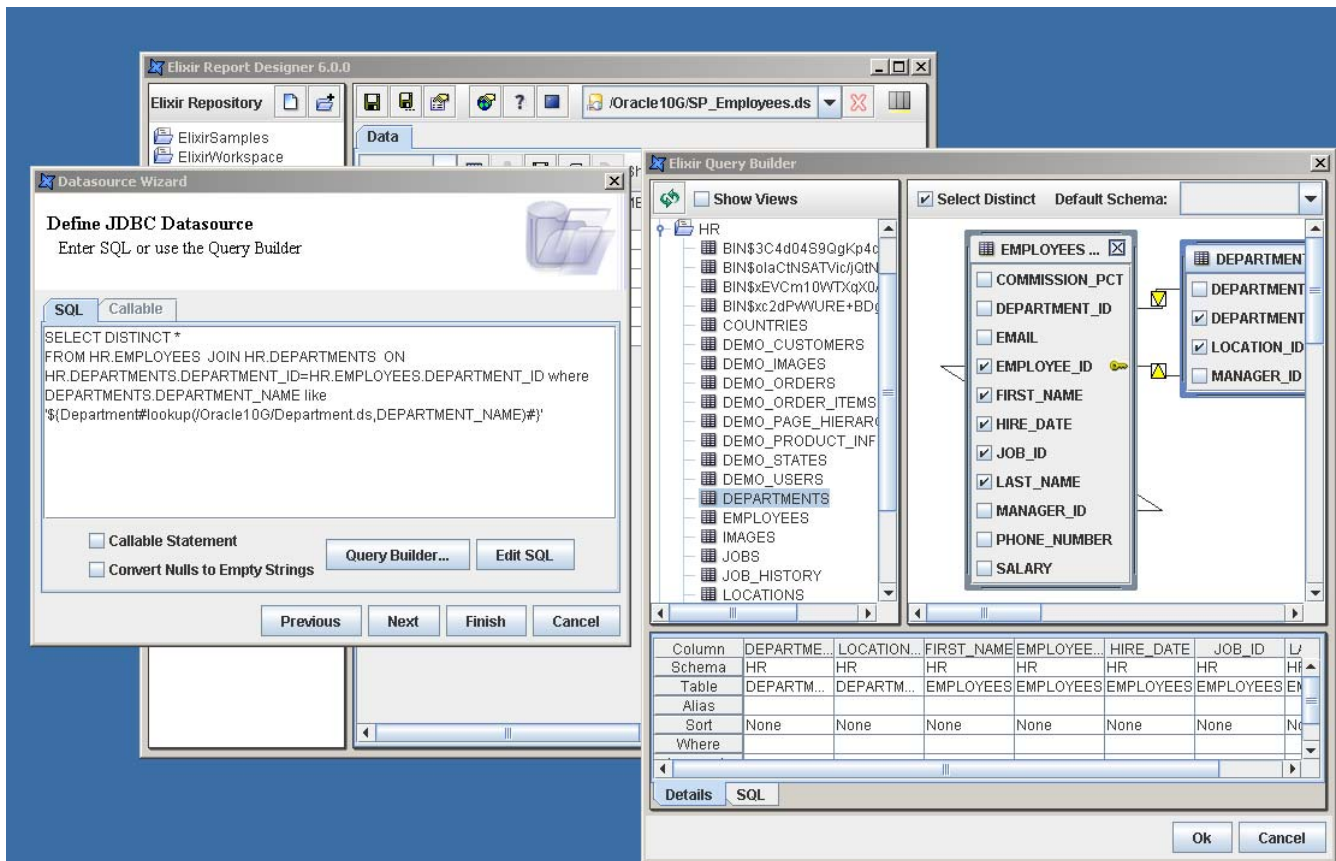

JDBC JNDI Pool

Driver Suggestions:
Driver: oracle.jdbc.driver.OracleDriver
URL: jdbc:oracle:thin:@localhost:1521:xe

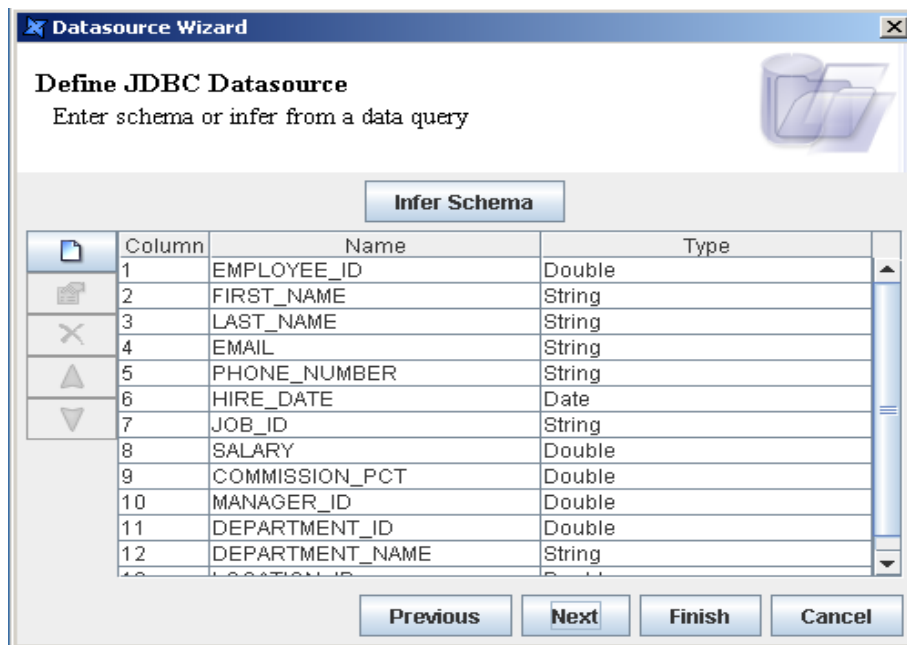

User: hr
Password: ** Hide Password

Previous Next Finish Cancel

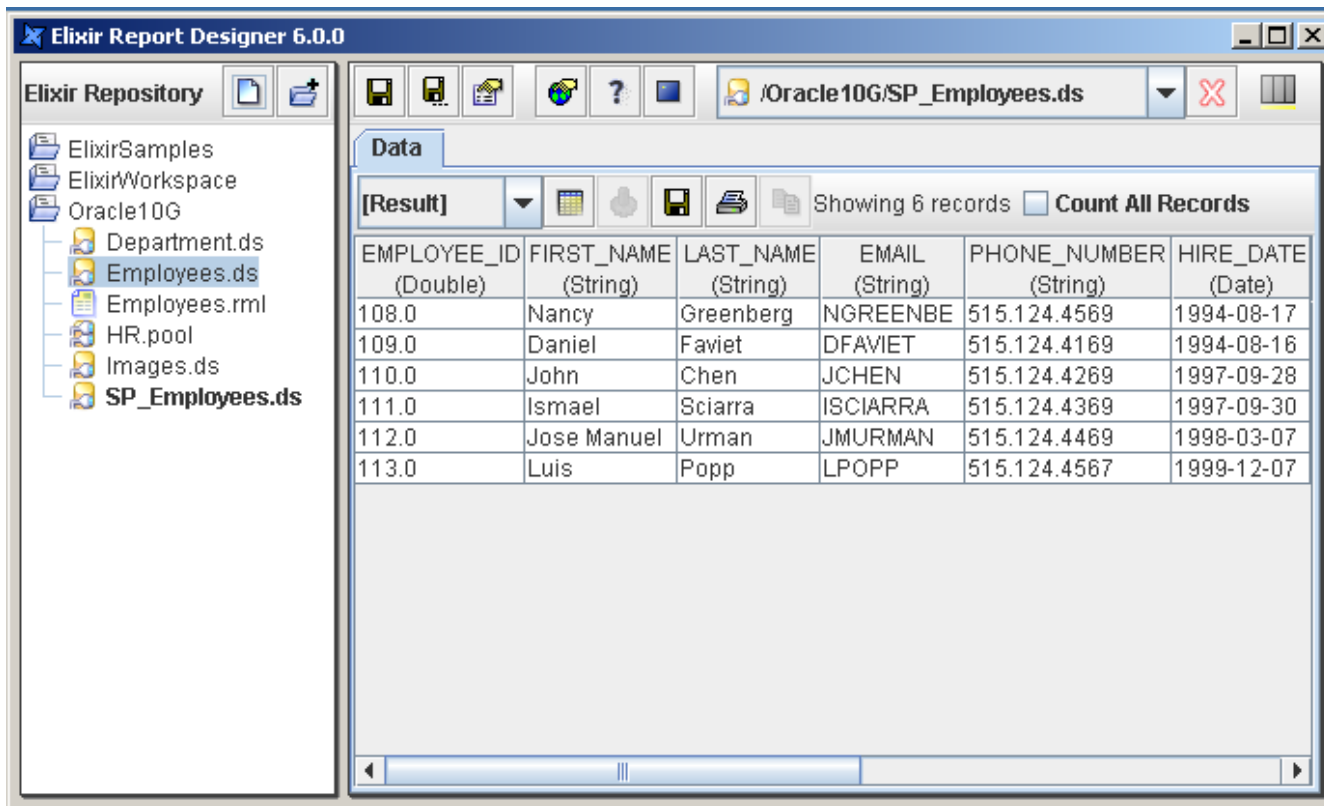

2) Click on the Next button and then construct a SQL Statement using Elixir Query Builder.

3) Click on the "Infer Schema" button

4) Test the correctness of the SQL Statement by clicking on the “Load Data” button in Data tab.

Using Oracle Stored Procedure

You can use Oracle stored procedure with Elixir Repertoire JDBC data source.

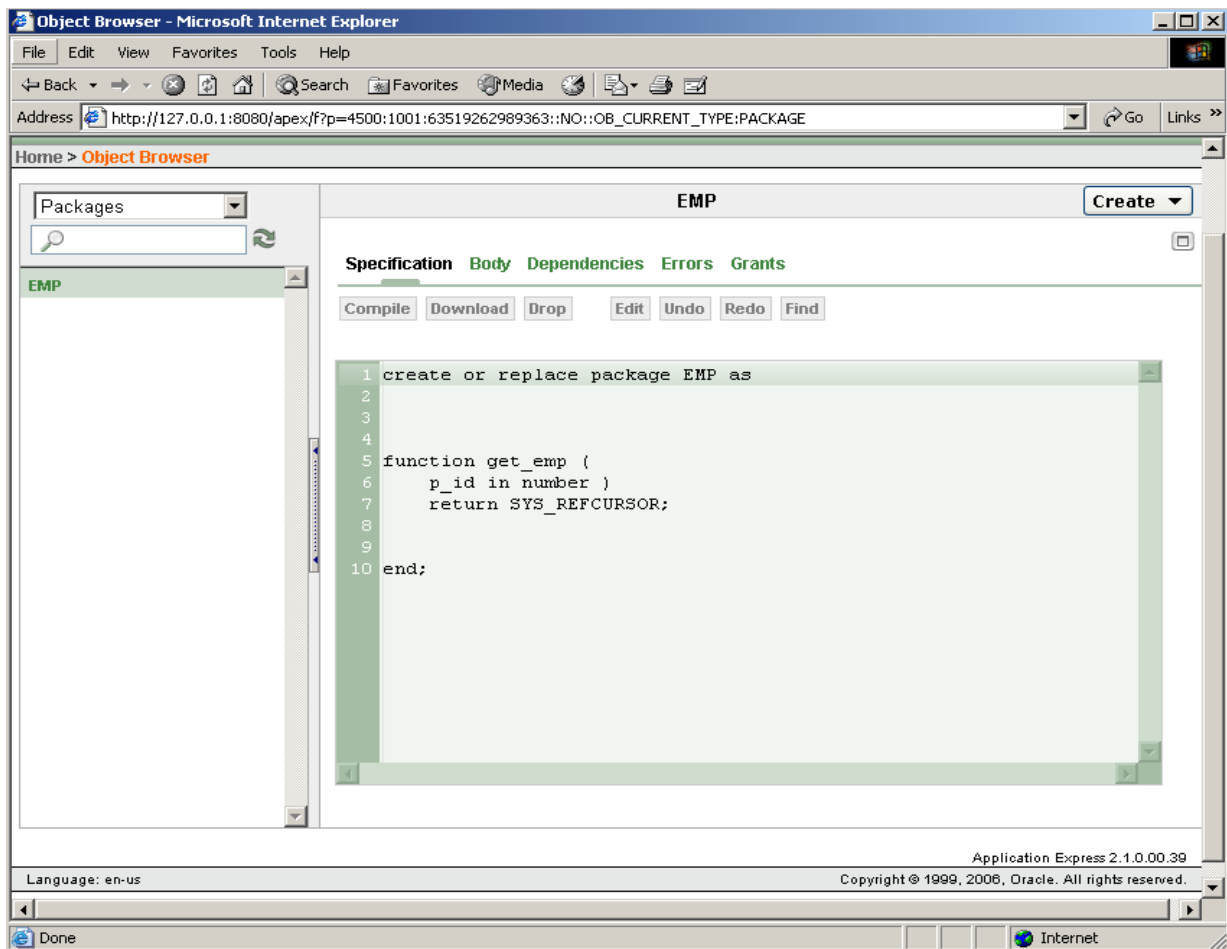

1) Define a Stored Procedure

Suppose we want to create a stored procedure to select employees in the hr schema.

This can be done in two steps.

a) Create the package specification

```
create or replace package EMP as
    function get_emp (
        p_id in number )
        return SYS_REFCURSOR;
end;
```

b) Define the function body

```
create or replace package body "EMP" is
function GET_EMP( P_ID IN NUMBER
)
return SYS_REFCURSOR
as records SYS_REFCURSOR;
begin
open records for
SELECT *
FROM hr.employees
WHERE hr.employees.department_id = P_ID ;
return records; /* insert function code */
end GET_EMP;

end EMP;
```

The screenshot shows the Oracle Database Express Edition interface. The browser address bar displays the URL: `http://127.0.0.1:8080/apex/f?p=4500:1001:63519262989363::NO::OB_CURRENT_TYPE:PACKAGE`. The page title is "ORACLE Database Express Edition". The user is logged in as "HR". The navigation bar shows "Home > Object Browser". The main content area displays the "EMP" package body definition. The "Specification" tab is selected, and the "Body" sub-tab is active. The code is displayed in a text area with line numbers 1 through 14. The code is as follows:

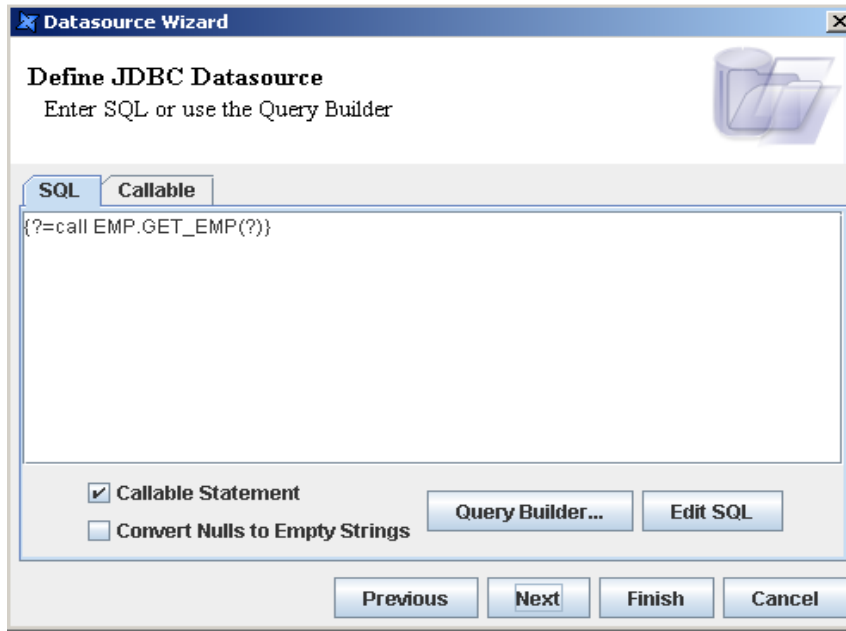

```
1 create or replace package body "EMP" is
2 function GET_EMP( P_ID IN NUMBER
3 )
4 return SYS_REFCURSOR
5 as records SYS_REFCURSOR;
6 begin
7 open records for
8 SELECT *
9 FROM hr.employees
10 WHERE hr.employees.department_id = P_ID ;
11 return records; /* insert function code */
12 end GET_EMP;
13
14 end EMP;
```

The footer of the page shows "Application Express 2.1.0.00.39" and "Copyright © 1999, 2006, Oracle. All rights reserved." The language is set to "en-us".

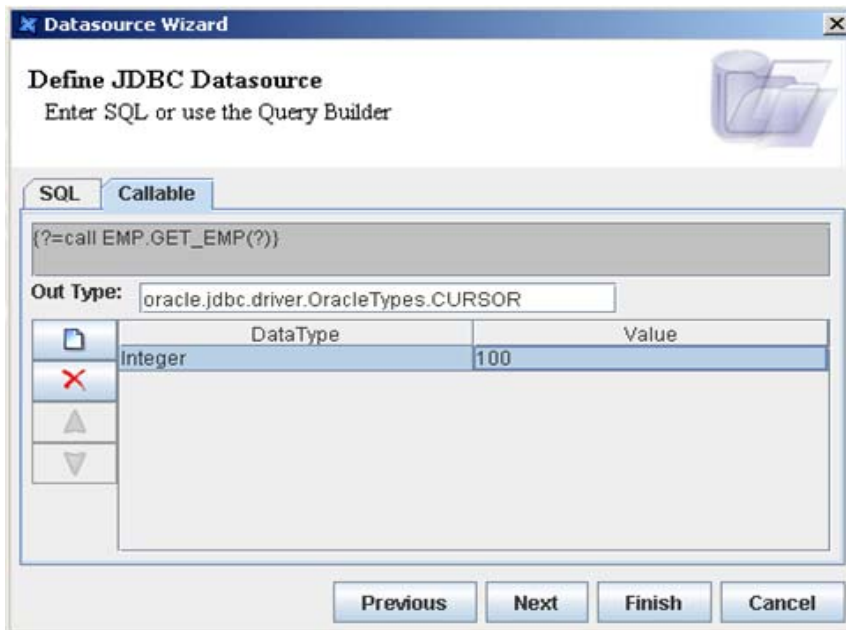

- 2) Test your stored procedure. Once the correct ResultSet is returned you can create your data source.
- 3) In Datasource Wizard dialog, enter the stored procedure as follows:

call procedure-name([[parameter],[parameter]]...), with ? representing parameters
 For example:
 {?=call EMP.GET_EMP(?)}

- 4) Enable Callable Statement option

- 5) At Callable tab enter the parameters

In this case there is only one *in* parameter of type Integer.

We can use dynamic parameters to allow more flexible behaviors, e.g. a data source lookup.

```
#{Department#lookup(/Oracle10G/Department.ds,DEPARTMENT_ID)#100}
```

6) Now you can test the data source.

The image shows a data table with 11 columns and 6 rows of data. Below the table is a dialog box titled "Dynamic Parameters" with a dropdown menu for "Department" set to "100".

EMPLOYEE_ID (Double)	FIRST_NAME (String)	LAST_NAME (String)	EMAIL (String)	PHONE_NUMBER (String)	HIRE_DATE (Date)	JOB_ID (String)	SALARY (Double)	COMMISSION_PCT (Double)	MANAGER_ID (Double)	DEPARTMENT_ID (Double)

Summary

Elixir Repertoire offers a wide array of functionalities for maximum business impact, while leveraging Java Standard & Enterprise Edition for cross-platform compatibility. Satisfied customers worldwide rely on Elixir Repertoire to improve operations efficiency as well as increase corporate profitability.

For additional information, please contact the Elixir at sales@elixirtech.com.

About Elixir Technology Pte Ltd

Elixir Technology provides a Unified Business Intelligence Platform for end-to-end information life cycle coverage from Extraction-Transformation-Loading (ETL), Data Aggregation, Cube, Reporting, Dashboard and Activation. Our flagship product, Elixir Report, has garnered over 600 customers across 50 countries in various verticals such as government, financial services, telecommunications, healthcare, retail, and technology. Going beyond enterprise reporting needs, our Integrated Business Intelligence Suite, Elixir Repertoire, is designed to further empower our customers toward becoming intelligent enterprises, where critical information is readily available to drive decisions and actions. Elixir Technology is headquartered in Singapore, with an R&D arm in UK. Through a network of partners, Elixir's products are represented in many parts of the world across major continents including Asia, America, and Europe. For more information, please visit www.elixirtech.com.
